

# ROADMAP

A generic framework to organise typical scientific and technical domains/sub-domains in a logical manner against different phases of a RWM programme.

THIS PROGRAMME HAS RECEIVED FUNDING FROM EURATOM RESEARCH AND TRAINING PROGRAMME 2014-2018 UNDER GRANT AGREEMENT №847593.

THIS PROGRAMME HAS RECEIVED FUNDING FROM EURATOM RESEARCH AND TRAINING PROGRAMME 2014-2018 UNDER GRANT AGREEMENT N°847593.

A **Roadmap**, with clear objectives, linking EURAD activities (as listed in the SRA) to milestones typical of different phases of a radioactive waste management (RWM) programme has been developed (focussed on those planning for disposal). The Roadmap relates to Joint Programme Founding Documents (and was not addressed by the preparatory work carried out in the EC JOPRAD project). It draws from the IAEA work (see, IAEA Planning and Design Considerations for Geological Repository Programmes of Radioactive Waste). The IAEA definitions of recognised phases of a waste disposal programme (and their associated major objectives) are used to provide the Roadmap framework:

- Phase o: Policy, framework and programme establishment\*;
- Phase 1: Site evaluation and site selection;
- Phase 2: Site characterisation;
- Phase 3: Facility construction;
- Phase 4: Facility operation and closure;
- Phase 5: Post-closure.

\*Note that Phase o was not covered by IAEA-TECDOC-1755, but added to recognise the needs of Members States who are in the process of establishing a waste management programme.

For each of the phases above, EURAD Roadmap explains how aspects related to, disposal facility design, and safety case development (and supporting safety analyses) span across all phases, including Phase o. The Roadmap elaborates further on the how the emphasis of work on each of these differs and changes through successive Phases.

The Roadmap demonstrates the totality of scope of EURAD and its relevance to waste management and disposal programmes at different stages of maturity. The Roadmap effectively provides a framework upon which to organise the scientific priorities of the SRA, enabling users and programmes to 'click-in', and to access existing knowledge and active work or future plans. It also provides a framework for future periodic assessment of EURAD, and to evaluate future priorities and new work packages as new knowledge is acquired or as new needs are identified.

The Roadmap comprises 7 tables:

- A domain-specific table showing how identified scope of the EURAD SRA relate to different Phases of implementation and typical Waste Management Programme objectives for each theme (grey boxes).
- The SRA topics/sub-topics within each Domains are flagged (<sup>1</sup>) to illustrate those being addressed in-part or in-full by scope of active EC-funded projects, including those of the EURAD 1. Topics/sub-topics that will be addressed in future work of EURAD are also flagged (<sup>1</sup>).
- RD&D, Knowledge Management and Strategic Studies are each coloured differently.

The Roadmap tables will be used throughout EURAD as a tool to support the management of the SRA in reviewing progress, to support prioritisation of new scope suggestions (importance and urgency) and communicating completed, ongoing and future work activities to those interested in our work.

Please note that contrary to the request by the EC for the SRA to be translated into a roadmap, with clear objectives, deliverables and high-level milestones for technical solutions per waste streams and waste types, we have intentionally avoided this. Rather we have utilised a work break down structure using domains and IAEA phases (focussed on geological disposal) that combines topics of RD&D relevant to many waste streams and technical solutions. Technical solutions need to be tailored and developed for the specific needs of a national waste management programme, particularly taking account of the waste characteristics and the options for siting. There is no one size fits all technical solution for each waste stream, choices on this remain the responsibility of the national waste management programme.

The IAEA phases used in the roadmap are of a general nature and are each applicable to several waste streams and waste types and include scope on knowledge management to share experiences. The same is also true of SRA domains with the topics / sub-topics where, however, some of the topics have less relevance for the other disposal routes. Furthermore, it is important to recognise that the disposal routes for the other waste streams (lower activity wastes consisting mainly of shorter-lived isotopes) do often not include geological disposal but surface or near-surface disposal. This technology is well established with a number of variants tailored to the specific needs (volumes and exact types of wastes) and boundary conditions (land use planning, etc.) of the respective countries. Depending upon the needs of the Beneficiaries it is suggested that the topic of developing a Roadmap for these types of waste is managed through the Strategic Study on "waste management routes in Europe from cradle to grave" with the support of experts managed by the Programme Office. This may need some modification of that WP in the course of the first year.

#### Key to Roadmap Diagrams:

- (1) Top Line Typical Phases of a Waste Management Programme (Phase o to Phase 4);
- (2) Second Line Design and Safety Case Focus in each Phase (Conceptual to Site-specific);
- (3) Third Line (light grey boxes) Typical Programme Objectives (How focus evolves from early stage to advanced-stage focus);
- (4) Fourth Line onwards (lines with multi-coloured boxes) Map of EURAD SRA Topics and Sub-Topics (colour coded according to RD&D, Strategic Studies or Knowledge Management Tasks)
