

Program of Geological Disposal

Build essential expertise in nuclear waste disposal—learn the fundamentals, connect with global experts, and access advanced training opportunities.

This course aims to give a good understanding of the different experience and competence areas that need to be covered in a nuclear waste disposal programme. It covers all aspects related to scientific and technical issues on a basic level. International conventions and regulations included.

It does also give the opportunity to interact with other participants in the same situation and experts from the successful Swedish programme.

We will deliver:

- Introduction to the **back-end** of the fuel cycle
- **Safety** assessment fundamentals
- **Multi barrier concept**
- **Site selection** and site confirmation
- Public relations and **social responsibilities** – experiences from success and failures

This course is intended for persons working with different parts of a nuclear waste disposal programme. It is most useful for persons who have already been working for a few years in the field.
